

MMS 2.22.1 Release Notes

Changes in 2.22.1

- 1) Add ability to remove "Date Account Opened" field from the MMS screen for checks (SS3, CHK, etc.). A new entry can be added to the screen file (xxxxxx.SCN): DatOpen= ^00^
Adding this line will prevent the Date Opened field from displaying. The field can also be renamed using this entry.

Changes in 2.21.3

- 1) Fix issue with comparing the starting check number with the database check number in batch printing. A 4-digit check number now correctly compares with a 3-digit number from the database,

Changes in 2.21.2

- 1) Fix printing issue when using D+H Phoenix interface.

Changes in 2.21.1

- 1) Increase maximum number of characters from 35 to 40 for form fields Address 1, Address 2, Address 3 and Address 4.

Changes in 2.20.4

- 1) Fix for Alternate INI Path using %USERPROFILE% - folder named BlauserMMS will be created under user's profile folder, not Documents, due to some users not having a Documents folder in the user profile path.
- 2) Fix to remove extraneous carriage return/line (CR/LF) feed characters from Name 1 field.

Changes in 2.20.3

- 1) Added additional CSI field Account Title using variable 13.

Changes in 2.20.2:

- 1) Added ability to lookup account number to find current check number when processing in batch mode.

Changes in 2.20.1:

- 1) Seed value not required.
- 2) Added ability to specify Print Device in command line interface.
- 3) Added log file to capture information useful for debugging.
- 4) Adjusted delay for various startup issues.
- 5) Added %USERPROFILE% option for Alternate INI file path – used to store printer info in user's profile folder.
- 6) Fix issue with duplicate items within a batch file.

Changes in previous releases:

- 1) Improved Printing functionality
 - a) Added HP 1505N and HP 2035 printer support
 - b) Added Compatibility Assisted Printing (CAP) Option required for supporting certain limited functionality printers like the HP 1505N and HP 2035

- c) Improved Font loading and handling capability (disable unused Fonts such as USPS Barcode or OCR-A).
- 2) Added option to disable "Print ALL Batches" to assist in centralized form processing with remote printing.
- 3) Increased the maximum number of users allowed to 9,999
- 4) Improved Security Handling and functionality
 - a) Increased length of User ID to 12 and password to 14
 - b) Added Password expiration capabilities
 - c) Improved the ability to set the user's Form Access rights.
- 5) Added "Auto Run" capability for future Core Product Interfaces.
- 6) Improved Screen Default functionality
 - a) Improved the handling of Screen defaults. All data entered on screen will be saved and will populate the fields on the screen including Extra 1, Extra 2, etc.
- 7) Added Data Export functionality to create an Excel compatible "CSV" file of the data associated with the particular form.
- 8) Added ability to 'rename" the Extra 1 and Extra 2 fields on the Data Entry screen and in the Variable names.
- 9) Added Extra 1 and Extra 2 fields to report.
- 10) Improved the reporting capabilities to include certain data that, due to content, did not print.
- 11) Added Routing / Transit number as a variable for printing other than in MICR line.
- 12) Increased the allowable size for the Database Path option from 25 to 78.
- 13) Improved the Define MICR Printer option for TS 2008 compatibility to only show printers in current session.
- 14) Added ability to have the Executable file reside in a separate folder other than the install folder.
- 15) Corrected issue with Column Headers on "CSV" File Exports.
- 16) Added ability to change default destination Folder for the Export Data function.
- 17) Added ability to create Credit Counseling Agency information for Mortgage / Loan coupons.
- 18) Corrected issue with Export Check Information destination folder not handling Drive letter only (X:\).
- 19) Corrected issue with Exit button on toolbar being "cut-off" in Windows 7.
- 20) Removed Credit Counseling Agency setup (no longer required).
- 21) Added ability to create Mortgage Loan Coupons compliant with the new CFPB Regulations.
- 22) Corrected issue with Late Fee calculation for new CFPB Mortgage Coupons.
- 23) Added new Deluxe Conversion (ConvertD.exe) to update.
- 24) Improved Loan Coupons Save to Batch capabilities.

- 25) Removed Group processing options.
- 26) Corrected several issues with User and Password Security administration File Locking process.
- 27) Corrected Issue with Hash-Lock file busy.
- 28) Added ability to create CSV file of all Users and the associated Form Access permissions.
- 29) Added ability to see all currently Logged-on Users.
- 30) Corrected issue with Exit button on toolbar being "cut-off" in Windows 8, 8.1, 10, etc.
- 31) Improved Program Debugging capabilities.
